

Atlas Analysis — Email Marketing Sequences

Sequence 1: Welcome & Onboarding (Days 0–7)

Email 1 — Immediate: Welcome

Subject: Your Atlas account is live — here's where to start

Preview: The market opens in the morning. You're ready.

Welcome to Atlas.

Your account is active. Before you dive in, here's how the platform is built so you can get value out of it from day one.

The Atlas Score (22–97)

Every stock in our universe gets a Score each morning. It combines momentum, analyst breadth, news sentiment, macro alignment, and valuation into one number. Higher = more factors pointing bullish. It's a starting point, not a conclusion.

The daily analysis

Top movers in each sector get a full research note: a Claude-generated narrative with specific numbers, three bull factors, two bear factors, and one actionable insight. These land before 9:30am ET.

Where to start:

- [Browse today's sector rankings]
- [Search a ticker you already follow]
- [Set your notification preferences]

If you have questions, reply to this email. We read every one.

— The Atlas team

Email 2 — Day 1: The Atlas Score explained

Subject: How the Atlas Score actually works (no black box)

Preview: Five factors, one number, no spin.

Yesterday we mentioned the Atlas Score. Here's exactly how it's calculated — because you should know what you're looking at.

Factor 1 — Momentum (30% weight)

Where is the price relative to its day range? Is it up or down? A stock that's +4% and in the top quartile of its day range scores much higher here than one that's technically "up" but sitting near its low.

Factor 2 — Analyst Breadth (20%)

How many analysts cover it and what's the split? Five Buys and zero Sells is different from five Buys and four Sells with two Holds. We look at the whole picture.

Factor 3 — News Momentum (15%)

How many headlines in the last 7 days and are they positive, negative, or neutral? Recent news that's positive skews the Score up. A flurry of negative headlines drags it down.

Factor 4 — Macro Alignment (20%)

This is the one most platforms skip. Each sector is weighted differently depending on the macro regime. When the yield curve inverts, mining and defense score differently than tech and media. We model this explicitly.

Factor 5 — Valuation (15%)

A basic P/E percentile signal. Sub-12x trades get a boost. 50x+ names get penalised. Simple, but it's a guardrail against narrative-only calls.

Then Claude reads the same data and writes the narrative. The Score and the narrative are built from identical inputs — they always agree.

→ [See today's top-scoring names]

Email 3 — Day 3: Your first sector deep dive

Subject: Which sector should you watch first?

Preview: Not all sectors trade the same way. Here's the playbook.

Atlas covers eight sectors. They don't behave identically — here's the quick cheat sheet.

Mining — Commodity-driven. Watch gold/silver macro, CAD exposure. TSX-heavy. Tends to pop on commodity news more than earnings.

AI — High beta, sentiment-driven. VIX above 22 compresses multiples fast. News momentum matters more here than almost anywhere else.

Tech — Rate-sensitive. Yield curve inversion + high fed funds = headwind. Best Atlas scores in tech tend to cluster when macro is easing.

Biotech — Catalyst-dependent. Atlas flags momentum but catalysts (trial readouts, FDA dates) aren't always in the news feed in advance. Use the Score as context, not as the whole thesis.

Energy — Fed funds and oil price regime. High rates can be a tailwind here if driven by growth. Sector macro alignment matters.

Defense — Counter-cyclical in stressed regimes. When VIX > 22 or the curve inverts, defense macro alignment scores jump. Good hedge sector.

Media — Rate-sensitive, structurally pressured. Hardest sector for pure momentum plays. Atlas scores are most useful here for avoiding the obvious traps.

Other — Everything that doesn't fit neatly. Worth scanning for outliers.

Email 4 — Day 7: Trial ending soon

Subject: Your free trial ends in 24 hours

Preview: Here's what you've accessed this week.

Your 7-day Atlas trial ends tomorrow.

This week you had access to:

- Daily analysis across 8 sectors
- Atlas Scores for [X] stocks in our universe
- Live prices and analyst consensus
- Claude-generated research notes before market open every day

If Atlas has been part of your morning routine this week, your subscription continues at **CA\$29.99/mo** — just keep your payment method on file. Nothing to do.

If you haven't explored it fully, here's one more morning to do that. [Open Atlas →]

If you want to upgrade to Pro or Institutional before your trial ends, you get a prorated credit for any trial days already used.

Questions? Reply here.

— The Atlas team

Sequence 2: Post-Purchase Onboarding (Days 1–30)

Email 1 — Day 1 after purchase: You're in

Subject: Atlas Core is active. First thing to do.

Preview: One action that takes 2 minutes.

Your Atlas Core subscription is confirmed.

First thing to do: open the platform and search for 3 tickers you already know well. See what Atlas says. Compare it to what you already think.

That's not a test of Atlas — it's calibration. When you understand where you agree and where the Score surprises you, you'll know exactly how to use it.

→ [Open Atlas]

Email 2 — Day 7: How to read the research note

Subject: Getting more out of the daily research notes

Preview: Bulls and bears aren't just labels.

The daily research note has three parts that work together.

Bulls (3 factors)

These are specific, numbered, dated. "5 of 7 covering analysts upgraded in the last 30 days" is a bull factor. "Strong chart" is not something we write.

Bears (2 factors)

Same standard. If there are no real bear factors, the Score reflects that — we don't manufacture risk warnings for balance.

Insight (1 sentence)

This is Claude's synthesis. It's the single most actionable line in the note. We prompt for it explicitly.

The best way to use these: read the insight first, then check whether the bulls and bears support or complicate it.

→ [Today's analysis →]

Email 3 — Day 30: Monthly check-in

Subject: One month in — here's what to look for

Preview: Patterns you can only see with 30 days of data.

You've been on Atlas for a month. Here's what that gives you.

Track record view

Look at names where the Atlas Score was 75+ at open and see how they traded through the week. Do the same for scores below 35. You're building your own calibration data.

Sector rotation signals

Over 30 days, which sectors are consistently scoring high? Which are getting dragged by macro? That macro alignment factor updates with every data pull — watching it shift is meaningful.

Your personal list

If you've been searching the same 10–15 tickers repeatedly, consider asking us about custom universe seeding on the Institutional tier. We can scope it for you.

→ [Open Atlas]

Questions as always — reply here.

Sequence 3: Win-Back (Churned users, Day 3 after cancel)

Email 1 — Day 3: Simple check-in

Subject: Was Atlas not working for you?

Preview: Honest question. We read the replies.

You cancelled your Atlas subscription a few days ago.

We're not going to make this a list of features you're missing. Instead: was there something specific that didn't work for you?

Wrong sectors? Interface issues? Pricing? Something in the analysis that felt off?

Reply to this email. We read every one and we've made real changes based on them.

If you'd like to come back, we'll extend your next trial by 14 days, no charge.

— The Atlas team

Email 2 — Day 14: Specific new feature note

Subject: What changed at Atlas since you left

Preview: One thing that's different now.

A few things have shipped since you had Atlas.

[Insert specific changelog item — e.g., "Real-time SSE price streaming is now live on Pro" or "We added full backtest track record view to Pro tier"]

If that changes the calculus for you, here's a 14-day trial to try it out. No credit card changes needed — just [\[click here\]](#) and your account reactivates.

If not, no worries — we'll stop emailing after this one.

— The Atlas team

Sequence 4: Upgrade Prompts (Core → Pro)

Email 1 — Triggered: user hits rate limit or views a Pro feature

Subject: You just hit the Core limit — here's what Pro unlocks

Preview: Real-time prices, leaderboards, export.

You tried to access a Pro feature on your Atlas Core account.

Here's what upgrading to **CA\$49.99/mo** unlocks immediately:

- **Real-time price streaming** — no more 15-minute delay. Prices update live via SSE.
- **Sector leaderboards** — ranked view of every stock in a sector by Atlas Score, updated each morning.
- **Backtest track record** — see how names with Score 75+ performed historically.
- **CSV export** — download any day's analysis to your own spreadsheet.

Upgrade takes 30 seconds and kicks in immediately.

→ [Upgrade to Pro]

Not sure? Reply with your question and we'll help you figure out if Pro is worth it for how you trade.

Standalone Emails

Transactional: Daily digest (optional subscription)

Subject: Atlas Morning — [Date] · [Top sector] leads, [Top ticker] +X.X%

Preview: [Sector] tops today's rankings. Atlas Score: [XX].

Morning, [first name].

Today's full analysis is live. Here's what's leading.

[Top sector]

[Ticker] — Atlas Score [XX] · [Sentiment]

[One-sentence insight from the note]

[Price] [+/-X.X%]

[Second sector]

[Ticker] — Atlas Score [XX] · [Sentiment]
