

Atlas Analysis — Video Scripts

Script 1: Platform Demo / Explainer (90 seconds)

Target: YouTube pre-roll, website hero video, LinkedIn

Tone: Calm, precise, no hype. Narrator is a practitioner, not a pitchman.

Visuals: In-app screen recordings with minimal UI overlays

[0:00–0:08]

VO: "Every morning before the market opens, Atlas runs."

Visual: Clock at 8:15am ET. Dark interface loads. Sector cards begin populating with scores.

[0:08–0:20]

VO: "It pulls live prices. It reads analyst consensus data. It checks the macro regime — yield curve, VIX, Fed funds rate. And it asks: given all of that, what do the factors say?"

Visual: Data streams — price tickers, analyst rec bars, macro dashboard pulling numbers.

[0:20–0:38]

VO: "The Atlas Score is the answer. Twenty-two to ninety-seven. Five factors, weighted and combined. Momentum. Analyst breadth. News momentum. Macro alignment. Valuation."

Visual: Score counter animating up. Factor breakdown expanding like an accordion. Each factor label appears as VO names it.

[0:38–0:52]

VO: "Then Claude reads the same data and writes the research note. Three bull factors. Two bear factors. One insight. All grounded in the numbers that just ran."

Visual: Research note expanding — sentiment badge, bulls (green highlights on specific numbers), bears (amber), insight line.

[0:52–1:05]

VO: "Eight sectors. Every morning. Before the bell."

Visual: Sector grid — Mining, AI, Tech, Biotech, Energy, Defense, Media, Other — all populating with top movers.

[1:05–1:20]

VO: "This is what institutional equity research looks like when it's built for traders who don't have institutional budgets."

Visual: Pricing screen — Core at CA\$29.99/mo highlighted. Clean, no tricks.

[1:20–1:30]

VO: "Atlas Analysis. Seven-day free trial. atlasanalysis.net."

Visual: Logo. URL. Clean out.

Script 2: Feature Spotlight — The Atlas Score (45 seconds)

Target: Social media (YouTube Shorts, Instagram Reels, X video)

Tone: Educational. Straight to the mechanism.

[0:00–0:05]

VO: "The Atlas Score isn't a black box. Here's exactly how it's calculated."

Visual: Score badge (e.g., 74) zoomed in.

[0:05–0:18]

VO: "Five factors. Momentum — thirty percent. Where's the price in its day range? Analyst breadth — twenty percent. Is the buy/sell split actually skewed or just balanced? News momentum — fifteen percent. What have the last seven days of headlines said?"

Visual: Factor breakdown animating in, each row labeling its weight.

[0:18–0:30]

VO: "Macro alignment — twenty percent. This is the one most platforms skip. Atlas knows that defense stocks behave differently when VIX is above twenty-two. Tech behaves differently when the yield curve inverts. That's not an opinion. It's a sector weight."

Visual: Macro dashboard — VIX reading, yield curve spread, sector weight adjustment indicator.

[0:30–0:40]

VO: "Valuation — fifteen percent. A P/E guardrail so the Score doesn't go Strongly Bullish on a stock trading at eighty times earnings."

Visual: Valuation factor row, P/E percentile displayed.

[0:40–0:45]

VO: "Five factors. One score. atlasanalysis.net."

Visual: Score badge again. URL.

Script 3: Problem/Solution (60 seconds)

Target: Meta video ad, YouTube pre-roll

Tone: Relatable problem, credible solution. No dramatization.

[0:00–0:12]

VO: "Before the market opens at nine-thirty, most retail investors are doing one of two things: either reading analyst reports that are twenty-four hours old, or scrolling financial Twitter trying to separate signal from noise."

Visual: Someone at a desk, multiple browser tabs open. Clock reads 8:47am.

[0:12–0:22]

VO: "Both work. Neither is efficient. And neither gives you the macro context that institutional desks use to decide which sectors are worth trading today."

Visual: Browser tabs slowly closing.

[0:22–0:38]

VO: "Atlas Analysis runs overnight. By the time you sit down with your coffee, you have the Atlas Score for every stock in our universe, AI-written research notes on the top movers, and macro alignment built into every number."

Visual: Atlas dashboard loading fully. Coffee cup lands next to keyboard.

[0:38–0:50]

VO: "Mining. AI. Tech. Biotech. Energy. Defense. Media. Eight sectors. Before the bell. Every day."

Visual: Sector cards, each with a top ticker and score highlighted.

[0:50–1:00]

VO: "Seven-day free trial. CA\$29.99 a month after that. atlasanalysis.net."

Visual: Trial CTA. URL.

Script 4: Founder Story (2 minutes — long-form)

Target: YouTube channel, About page video, investor pitches

Tone: First person, honest, not polished pitch voice.

Speaker: On camera. No teleprompter feel.

[0:00–0:20]

"We didn't build Atlas because we thought we could beat the market. We built it because the research tools available to retail investors are genuinely bad.

Not bad as in inaccurate. Bad as in: they were designed for a different kind of investor than us."

[0:20–0:45]

"Most platforms give you price charts and some analyst ratings and call it research. What they don't give you is context. When the yield curve inverts, that means something different for a mining stock than it means for a software company. Most tools don't know the difference. They just give you the number."

[0:45–1:10]

"So we built the Atlas Score. Five factors. Momentum, analyst breadth, news sentiment, macro alignment — which is the one we care most about — and a valuation signal. Every factor is weighted. Every factor is derived from real data. Nothing is generated by inference."

[1:10–1:30]

"Then we use Claude — the AI — to read the same data and write a research note. The important part: Claude doesn't invent the numbers. It interprets them. Bulls, bears, one insight. Strict output format. No hallucination risk in the factors because the factors are computed before the AI ever runs."

[1:30–1:50]

"This runs every night. By nine-fifteen Eastern, you have scores for everything in our universe. By nine-thirty, the top movers across eight sectors have full research notes. You read them. You decide. We're not telling you what to buy."

[1:50–2:00]

"Seven-day free trial. CA\$29.99 a month. We built it because we needed it. We think you might too. atlasanalysis.net."

Production Notes (All Scripts)

Visuals to capture:

- App dashboard loading from skeleton state (demonstrates performance)
- Score number counting up (animated)
- Factor breakdown expanding
- Research note appearing with specific numbers highlighted
- Sector grid full view
- Mobile view (for short-form)
- Price tickers updating in real-time (Pro tier demo)

Brand settings:

- Background: #06080f (dark), #eef0f5 (light variant)
- Accent: #4f8fff (blue), #a855f7 (purple)
- Font on screen: DM Sans + IBM Plex Mono for numbers
- No music with lyrics
- Music tempo: measured, not urgent — this is research, not a trade desk
- Voiceover: neutral North American accent, measured pace, no affectation
